Boots, Current Body & Look Fantastic.**

**Prices start from £129.00**

Innovative devices combining professional knowledge with proven technology to help beauty enthusiasts completely remove unwanted hair, fight the signs of ageing and firm up sagging skin; all from home!

## SensilightPRO

We understand that life can be hectic, and whilst you can't always find time for beauty appointments, you still want to stick to your beauty regime which includes removing unwanted facial and body hair.

Well, now you can, with Sensica's Sensilight PRO, the next generation of permanent hair reduction, without tricky shaving, messy waxing, or painful exfoliating.

The Sensilight PRO uses highly effective, FDA-cleared Reactive Pulsed Light (RPL™) technology that is based on Intense Pulsed Light technology (IPL), the same used by professionals. Designed with both effectiveness and safety in mind, RPL™ is a combination of IPL and a unique skin tone and contact sensor that reacts to identify the most suitable energy level to your skin tone and condition, to ensure you always get a safe, personalised and professional treatment with complete confidence.

With a 4.5cm<sup>2</sup> treatment window for larger areas of the body, such as legs and arms, and a 2cm<sup>2</sup> precision tip with integrated UV filter to deliver a gentle, accurate treatment to smaller areas, such as the upper lip, chin and jawline, the cordless design gives you full freedom of movement. With up to 600 flashes between charges – an outstanding feature unmatched by any other device on the market – including a warranty of flashes for a lifetime, you can keep going for longer, achieving remarkable, silky-smooth skin, that targets each hair follicle at the source.

## Sensilift

That feeling when you look in the mirror and see a face looking back at you that isn't the one you thought – or hoped – to see? We get it, we know how wrinkles can make you feel. They may be called laughter lines, but wouldn't it be great to be able to laugh freely, without having to worry about them?

Using the powerful, advanced technology of a medical professional for the ideal way to rejuvenate your skin at home, Sensilift is an innovative anti-aging device that boosts collagen production to reduce wrinkles and tighten your skin, with built in intelligent sensors that constantly measure your skin condition, adjusting the temperature to ensure a safer, personalised and optimised treatment.

Revolutionising the traditional approach to non-invasive anti-ageing treatments by using Dynamic RF™ technology, the secret behind the Dynamic RF™ is the unique dual action: while the fingers of the device move continuously across the skin, the clinically proven Dynamic RF™ technology allows the radio waves to penetrate multiple layers of skin simultaneously. This combination of clinically proven RF (Radio Frequency) technology both enhances existing collagen and generates new collagen, to reduce the appearance of loose skin and fine lines to promote a younger-looking illusion.

Offering a clinically proven solution for mild to moderate facial wrinkles that you can use at your own convenience, the quiet, hand-held device will give you noticeable results, improving your skin's elasticity to reveal smoother, more radiant skin after just one use.

## Sensifirm

Cellulite is caused by factors such as genetics, age and hormones, and whilst it can strike whether we're young or old, slim or overweight, sporty or, frankly, exercise phobic, you'll know that there's pretty much no way to stop it from happening.

Sensifirm is a revolutionary, non-invasive approach to cellulite reduction and body contouring, bringing state-of-the-art salon technology to the comfort of your home, with visible results from the very first use.

Ergonomically designed for comfortable use, the portable, effective firming device tackles those areas prone to stubborn fat and cellulite such as the thighs, buttocks, waist, stomach and arms using revolutionary, FDA approved Lipotherm Radio Frequency technology Lip (RF™), to activate natural collagen production and decrease the volume of fat cells, repairing the damage deep within the skin that causes cellulite.

For an added layer of safety, specialised sensors constantly monitor your skin's condition, adjusting the temperature to ensure a more personalized and safer treatment, for a reduced body size, visibly less cellulite and a firmer silhouette. With continued use, the gentle massage and deep heat increases micro-circulation, improves lymphatic drainage and the release of toxins from the body.

## SensilightMini

Swap your disposable razors and waxing strips for the Sensilight Mini, an at-home permanent hair removal device, designed to eliminate hair regrowth.

Quick, easy and pain-free, the clinically tested and approved device utilises Reactive Pulse Light (RPL™) technology to remove facial and body hair from the root, so you can ditch the tricky razors and the sticky wax, while preventing unwanted hair growth, once and for all.

Built-in sensors monitor your skin's condition, ensuring safety with every treatment. The hand-held device fits comfortably in your hand, and with a push of a button, releases single or continuous flashes to zap hairs, leaving your skin, silky and smooth.

## SensiliftMini

Time has a way of taking its toll on our skin, so slow down the signs of aging to reveal a more radiant, toned and happier you, with the Sensilift MINI.

As a non-invasive, medical-grade facial therapy device which helps your eyes and lips look and feel rested, even after a single treatment, the Sensilift MINI utilises patented InTense™ Technology which works on the deeper layers of your skin, offering a double safety mechanism to constantly adjust the temperature of the beams, ensuring optimum comfort and safety.

Promoting collagen synthesis and deep tissue lifting to encourage the illusion of a firmer, tighter-looking visage, the light, compact and powerful device is perfect for on-the-go, and ideal for people prone to the appearance of crow's feet, smile folds and fine lines, along with the look of ageing hands, to restore the confidence in your natural beauty.

## NOTE TO EDITORS:

Sensica are the founders of innovative devices using proven, potent treatments to help beauty enthusiasts completely remove unwanted hair, fight the signs of ageing and firm up sagging skin; all from home.

Having been at the forefront of the professional medical aesthetics field for decades, Sensica are proud to have made professional, non-invasive technologies, available for personal use.

Each device in Sensica's line of revolutionary skin care and beauty devices is based on clinically proven, proprietary technologies that have been specially adapted for personal use, to bring its users clinic-grade techniques for clinic-grade results.

The superior experience delivered by their ergonomic, easy-to-use devices enables users to carry out treatments when they want, where they want, while still achieving visible, long-term results that they'll love.

Sensica's scientists and thought leaders are constantly working on new methodologies for breakthrough treatments for the face and body, finding improved ways to provide their technologies for home use, safely, simply and effectively.
